February 1st 1978

Dear Osiatynski,

I enclose copy of the answer of Gomulka to my letter of which you have already a copy. You see from this letter that he has no objection against the editorial comment proposed, but he does not seem prepared to undertake the trouble of expanding the last point of this comment.

In accordance with Gomulkas correction line 12 from below on p 1 of my proposed text should read: Equation 3 yields explosive cycles with a period smaller than the lag θ for all positive values of a , b , and θ .

Yours sincerely,
