

neo-classical

knows no explicit capacity

actually the services of
equipment are offered on
the market (i) and the
markets are cleared, so
the remuneration is reduced until
explicit capacity appears.

(in analogy to the recovery
about unemployment,

The real question seems to be that
these services are not offered
separately but jointly with other goods (factors)
input into them in a product.
And it may be in principle to
reduce the price of the product
sufficiently by making the production
service cheaper.

The same goes for labor

Zeitwert

Persistence of form

"intrinsic changes"
"open sets"

my question is whether (inverts?)
the problem exogenous-endogenous
is in any way related to this?
