

Student Relation of the two approaches;

In Wealth we have our old Iron - Wools,

But what is not our present interest, we have

two ~~pieces~~ things:

The Stock distribution (work, educ, ~~work~~)

and the return net distribution.

The educat, invest approach would put all the burden on the stock distribution! But that seems too heavy for it. (I write in the events it would do, it won't be advised in any way.)

We have to go to the return net chances and their development.

That is explained by the increases of organization, technology, mass media consumption,

in short, increases based on wonders of information efficiency.

this development will be accelerated or restrained by availability of trained people!

and determine their chances of return. (see)

27) That may have something to do with technology tension theory
