

How's results:

difference in b :

1) Machining

percentage of new parts that went into their make up

2. Compound copiers (Alclium)

old model

improved model; larger program ratios !!

(I would have expected the opposite !!)

and H. contradicts himself (machining!)

Does kind not misinterpret Alclium or said

"older more experienced facilities"

(meaning plant or firms?) have

larger program ratios than new ones.

Mach's case quite

opposite, !!!

But puzzling !!!

^a Program ratio's

↳ hyper elasticity
