

It may still be an integral but in
the form of an "influence globale".

In the savings case this is the
debt proportion - -
or "equidity" position,

The essential thing is that we have
variables which change slowly -
as integrals do,

Also the capacity is and a
slowly changing variable,
being the integral of investment,

Perhaps also the order book? Depends on branches!

Utilization will necessarily be slow
directly after new equipment has been
installed!
