

Utilization:

He may plausibly know the growth of capacity over the last 5-7 years, and he may know how much his sales have increased in that time!

$$\frac{y_n - y_0}{\Sigma I}$$

$$\frac{1 - C_n - C_0}{\Sigma I}$$

Our integral might also be derived from these two data - integrate the investments and the sales which resulted increase economically from them and the distribution elements.

Contrast ^{s/Δw} trans. cycle (b) relates to effect on competition ^{not to invest}

! to distribute (!)
 But that may be connected with invested because of new outlets

relation between spec. of margin & element of ex. cap. capacity

relation of invested to w in the same level or logarithm!
