

~~the~~ The statement <sup>(mistaken)</sup> "innovations arise when (or when) they are needed" is really childish; it presupposes a kind of magic. - It is a quite obvious thing to say that they do not arise <sup>or</sup> (are not realized) when they are not needed.

That is largely true. There are numerous examples of practical frustration of untiring innovative effort. about

Did the "dramatizing up" <sup>(transfer of)</sup> of know-how play a role in industrial revolutions?

(The agrarian revolution was imported from the low countries! Political conditions for the transfer:)

New types of landlord, Capitalist spirit in agriculture.
