

Kalecki
TWW

followed up his microeconomic analysis
- in a rather disconnected way -
with a purely macroeconomic relation
between wage + salary and national product

TED
p. 39-41

- we found that the influence of raw material
here drops out what is a pity because
it was a concern to a revision what
gives room to more than two classes - capital + labour

Cyclical changes in
the share of wage + salaries
in the gross income of
the private sector?

1971 p. 74-77

was for
any man, big wages, the worse cost
Kalecki better only wages!

Actually I followed Kalecki's
method and method

In fig 1 to

overheads are absolute, not in pic of proceeds ??
of course, because they stay constant!

Stress the difficulty of applying Kalecki:
